

Internship Summary — Krishna

One-month Project Internship (Artificial Intelligence Intern) at Codec Technologies. Pan-India hybrid placement from 05/07/2026 to 05/08/2026. Reporting to assigned project head(s).

Offer Snapshot

Position

Artificial Intelligence Intern —
Project-focused, hands-on
responsibilities.

Duration

05 July 2026 → 05 August 2026 (1
month)

Location & Mode

Pan-India — Hybrid (mix of remote
and on-site depending on project
needs)

Supervisor

Assigned Project Head(s) — weekly performance reviews

NCS ID: E19E86-0116588288923 ▪ Issued by Dr. Anurag Shrivastava, Codec Technologies India

About Codec Technologies

Global learning and consultancy platform operating across 27+ countries. Focus: IT and business consulting, talent development, and industry collaborations to enable strategic growth.

Internship Goals & Learning Objectives

01

Understand real-world AI projects

Study problem statements, data sources, success metrics, and deployment constraints.

02

Build and validate models

Implement preprocessing, model selection, training, and evaluation pipelines.

03

Collaborate & deliver

Work with supervisors, present weekly progress, and refine solutions based on feedback.

Outcome: Hands-on portfolio pieces, improved technical proficiency, and eligibility for scholarship based on weekly reviews.

Typical Project Activities

- Data collection, cleaning, and EDA
- Feature engineering and model prototyping (supervised/unsupervised)
- Hyperparameter tuning, cross-validation, and performance reporting
- Model deployment basics: REST APIs, containerization, or demo notebooks

Weekly reviews with project head to evaluate progress and mentorship opportunities.

Weekly Roadmap & Deliverables

1

Week 1: Onboarding & Scoping

Platform setup, project brief, initial dataset exploration.

2

Week 2: Modeling Phase

Baseline models, experiments, and interim results.

3

Week 3: Refinement & Validation

Hyperparameter tuning, validations, and robustness checks.

4

Week 4: Delivery & Demo

Final model, documentation, presentation demo, and performance review.

Skill Area

Skill Focus

This internship emphasizes practical ML competencies (modeling, evaluation), with supporting skills in data engineering and deployment foundations to produce demonstrable portfolio results.

Expectations & Evaluation

Professionalism

Timely communication, diligent task completion, and active collaboration.

Quality of Work

Reproducible code, clear notebooks, and concise documentation.

Weekly Performance Reviews

Supervisor scores determine eligibility for scholarship and letters of recommendation.

📄 Tip: Keep a short weekly summary (1 page) documenting decisions, outcomes, and next steps — helps during reviews.

Deliverables for Krishna

- Completed project code repository with README and reproducible steps
- Final report (2–4 pages) summarizing approach, results, and lessons learned
- 5–7 minute demo presentation / recorded walkthrough
- Weekly progress summaries and artifacts for review

Exceptional contributions may be awarded a scholarship by Codec Technologies.

Next Steps & Acceptance

To accept: Confirm availability and complete assigned onboarding tasks on Codec's platform. Ensure access to required tools (Python, Jupyter, Git) and share contact details for your project head.
